DETAILED ACTION

1. This is a replay to the application filed on 02/27/04 in which, claims 11-20 are pending. Claims 11, 18 and 20 are independent, and claims 12-17 and 19 are dependent. Originally filed claims 1-10 which are cancelled by a preliminary amendment filed on 02/27/04, has been entered.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 03/14/06 and 12/27/04 has been reviewed. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

Reason for Allowance

4. The following is an examiner's statement of reasons for allowance: Claims 11-17 are allowed for the reason the prior art searched and of record neither anticipates nor suggests an image processing method for recovering reading faults from digitized image data of an input image read from an image recording medium, the faults being due to imperfections present on the image recording medium, said method comprising

the steps of: detecting defective pixels influenced by said imperfections; performing an interpolating process for said defective pixels to create corrected pixel values for said defective pixels; calculating standard deviations of pixel values forming the image data, and determining granularity of said input image based on said standard deviations; and adding a value obtained by multiplying said granularity by a random number to said corrected pixel values for each defective pixel.

Claims 18 and 19 are allowed for the reason the prior art searched and of record neither anticipates nor suggests a computer-readable medium comprising computer-executable instructions for recovering reading faults from digitized image data of an input image read from an image recording medium, the faults being due to imperfections present on the image recording medium, said computer-executable instructions for: detecting defective pixels influenced by said imperfections; performing an interpolating process for said defective pixels to create corrected pixel values for said defective pixels; calculating standard deviations of pixel values forming the image data, and determining granularity of said input image based on said standard deviations; and adding a value obtained by multiplying said granularity by a random number to said corrected pixel values for each defective pixel.

Claim 20 is allowed for the reason the prior art searched and of record neither anticipates nor suggests an image processing apparatus for recovering reading faults produced in time of scanning photographic film due to imperfections present on

the film, said apparatus comprising: a defective pixel detecting unit for detecting defective pixels influenced by said imperfections; an interpolating unit for performing an interpolating process for said defective pixels to create corrected pixel values for said defective pixels; a standard deviation calculating unit for calculating standard deviations of pixel values forming image data, and determining granularity of an input image based on said standard deviations; and a graininess adding unit for adding a value obtained by multiplying said granularity by a random number to said corrected pixel values for each defective pixel.
